

## **Speech at the 9th Asian Shipbuilding Experts' Forum**

Dacheng GUO

Chairman of CANSI

Ladies and Gentlemen: Good morning.

Today, the 9th Asian Shipbuilding Experts' Forum is ceremoniously held in the beautiful City-Nantong. On behalf of China Association of the National Shipbuilding Industry, I would like to express our warm welcome to all the friends of the shipbuilding colleagues from Asian countries. I would also like to extend our sincere gratitude to all the enterprises and individuals who have provided supports and assistance to the opening of this Forum, especially to JSTRA, KOSHIPA, SAJ, China Shipbuilding Industry Corporation, China State Shipbuilding Corporation, China Classification Society and relative local shipbuilding industry associations for their excellent work done for this Forum.

Asian Shipbuilding Experts' Forum is an efficient platform for the Asian shipbuilding countries to communicate and exchange opinions on the current international maritime issues of shipbuilding regulations, standards, specifications, and technology etc. Through 8-year continuous development and all Asian aspects' joint efforts, the Forum is playing an increasingly important role in promoting and improving the level of Asian shipbuilding technology, in bolstering the Asian shipbuilding industry voice in the course of international maritime regulation development, and in establishing a harmonious and sustainable development situation.

The main topic of Forum this year is safety and environment issues. The major subjects of Forum include shipbuilding industry outlook, Asian maritime industry status, container safety, GBS, e-Navigation, Polar Code, IGF Code, EEDI progress and underwater noise etc. Meanwhile, the international non-governmental organization, belonging to Asian shipbuilding industry, will hold the Inaugural Assembly tomorrow afternoon. It means Asian Shipbuilding Experts' Forum has achieved substantial progress in IMO-NGO issues, which is a landmark for Asian shipbuilding industry to participate in IMO.

Although shipbuilding market is still stuck in a trough, I firmly believe, through actively exchanging opinions and sharing ideas on the shipbuilding technology, it will facilitate our work on building the vessels meeting the international regulations and standards, and will make positive contribution to shipbuilding industry development.

At last, I wish the 9th Asian Shipbuilding Experts' Forum a great success!
